

# Control Cockpit Software

The database-driven software Control Cockpit administers the access authorisations. It logs and documents all access to the server racks. Measurements by sensors are completely captured and monitored for limit violation. The integration into higher level systems is effected via SQL interface.

## Features

### User administration

- Easy addition of users and assignment of user groups
- Individual allocation of authorisations and personal PIN codes

### System administration

- Administration of up to 50 rack management systems with the connected components such as handles, sensors or card readers
- Basic functions:
  - Easy import of transponder cards
  - Assignment of rights for transponder cards with user-defined allocation
  - Assignment of access rights for locks
  - Allocation of rack groups
  - Setting of limits for sensors and activation of alarms

### Real-time features

- Convenient opening of the handles after entering a PIN code
- Comprehensive control and monitoring functions
- Display of alarm statuses of handles or sensors by colour change
- Comprehensive filter functions for displaying the most important information

### Configurable screen views

- Individual design of the screen views in various windows

### Storing of measurements

- Monitoring and registration of temperature values for determining the thermal stress
- Graphic trend display of the measurements of historical or life data in user-definable time slots
- Simple storing or printing of diagrams via export function

### Logging and analysis

- Archiving of events of all connected systems in a joint database
- Creation of customer-specific reports with comprehensive filter and export functions

### Remote-controlled access

- Installation of the client software in any number of places
- Access to central database as client
- Encrypted data transfer within the network

### Integration into external systems

- Open database structure enables the simple integration into higher level systems via SQL interface
